# Homework 2 Report

學號: r07942086 系級: 電信碩二 姓名: 顏宏宇

1. (1%) 請說明你實作之 logistic regression 以及 generative model 於此 task 的表現, 並試 著討論造成此差異及可能原因。

ans0.5122442370864515.csv a minute to go by r07942086_hyyen logistic regression	0.81660	0.81940
ansg.csv 30 minutes ago by r07942086_hyyen	0.80760	0.80960

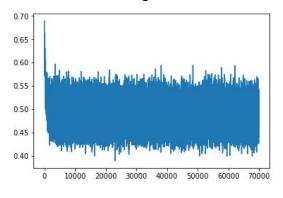

generative model

如上圖,我的generative model對於這個task比較不準確,可能是因為logistic regression model我有做比較多的改良(adam, data standardization等),而generative model我只有用 基本的機率去算,所以效果比較不好。

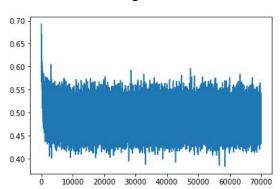

2. (1%) 請試著將 input feature 中的 gender, education, martial status 等改為 one-hot encoding 進行 training, 並比較其與原本的差異及其可能原因。

兩者的訓練過程如下, 基本上看起來差不多。

### 沒有one-hot encoding

# 有one-hot encoding

而最後的準確率,可以看到雖然public是沒有one-hot比較高,但private卻是有one-hot比 較高,所以我想對我的模型而言,有沒有one-hot的效果其實差不多。

可能是因為原本的data就足以train到local minimum, 就算改了one-hot還是會卡在差不 多的local minimum, 改模型設計比較可能有比較大的影響。

no one hot		

# 3. (1%)請試著討論哪些 input features 的影響較大、哪些input features 的影響較小(方法不限)。

ans0.48222005536708906.csv 4 days ago by r07942086_hyyen no LIMIT_BAL	0.81620	0.81740

我的作法是把各種input feature從training data拿掉,看拿掉哪一種feature會讓模型效果 變差最多,就是對模型影響最大的feature。 可以看到PAY0~PAY6的feature平均分數最低,對模型影響最大。 BILL AMT1~BILL AMT6的feature平均分數最高,對模型影響最小。

4. (1%)請實作特徵標準化 (feature normalization),並討論其對於模型準確率的影響與可能原因。

## 兩者的準確率如下圖,可以看到有feature normalization的效果明顯好很多。

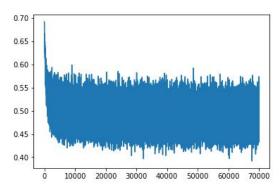

<b>ans0.6962475522356161.csv</b> 4 days ago by r07942086_hyyen	0.21880	0.21940
Without feature normalization		
<b>ans0.47872810863806065.csv</b> 4 days ago by r07942086_hyyen	0.72440	0.74160

With feature normalization

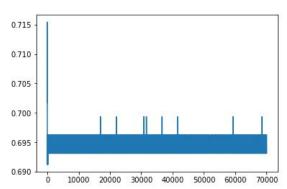

而兩者的訓練過程(loss)如下,可以看出對於沒有feature normalization的版本在訓練過程中 loss很容以卡在差不多的值,可能是陷入local minimum或是平坦的地方,而且難以走出來。

而有feature normalization 之後由於feature之間的scale差異比較小,比較容易train出比較好的結果。

### 有 feature normalization

### 沒有 feature normalization
